Dataverse Service Principal Connection

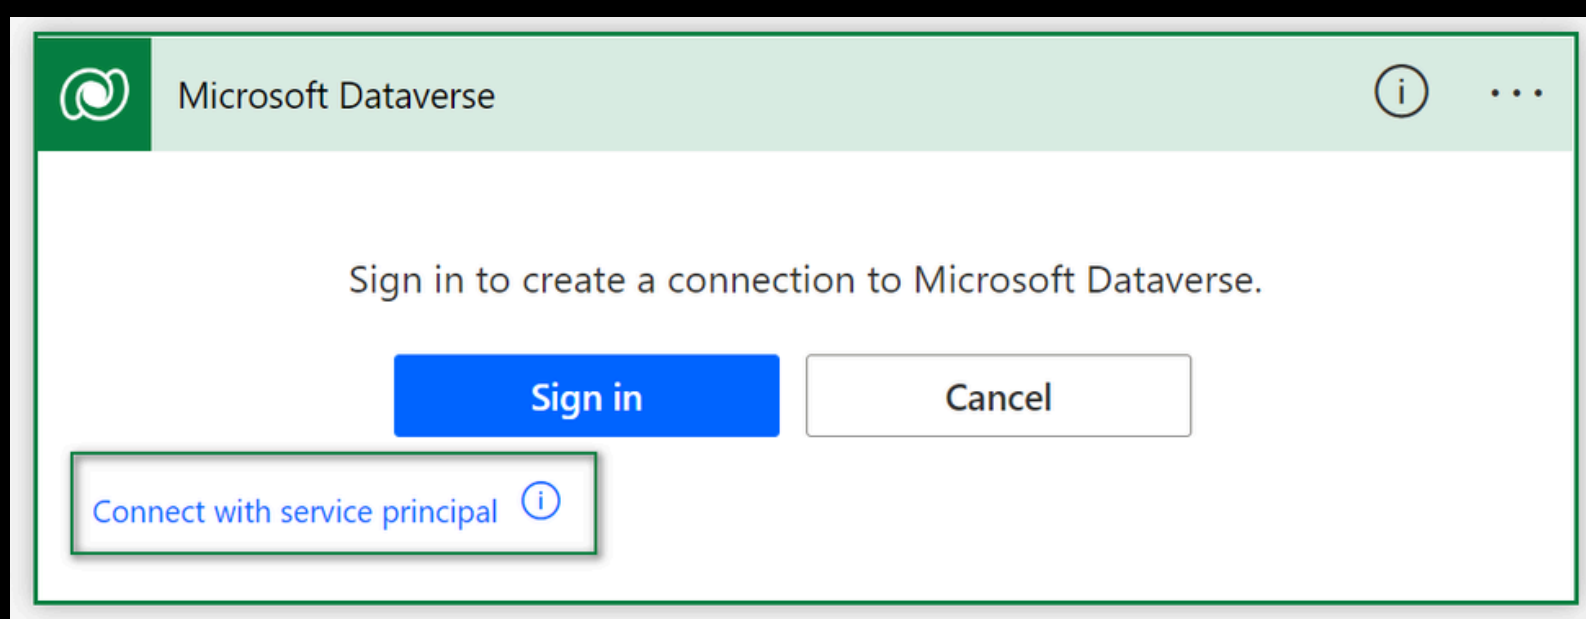

-

The new way

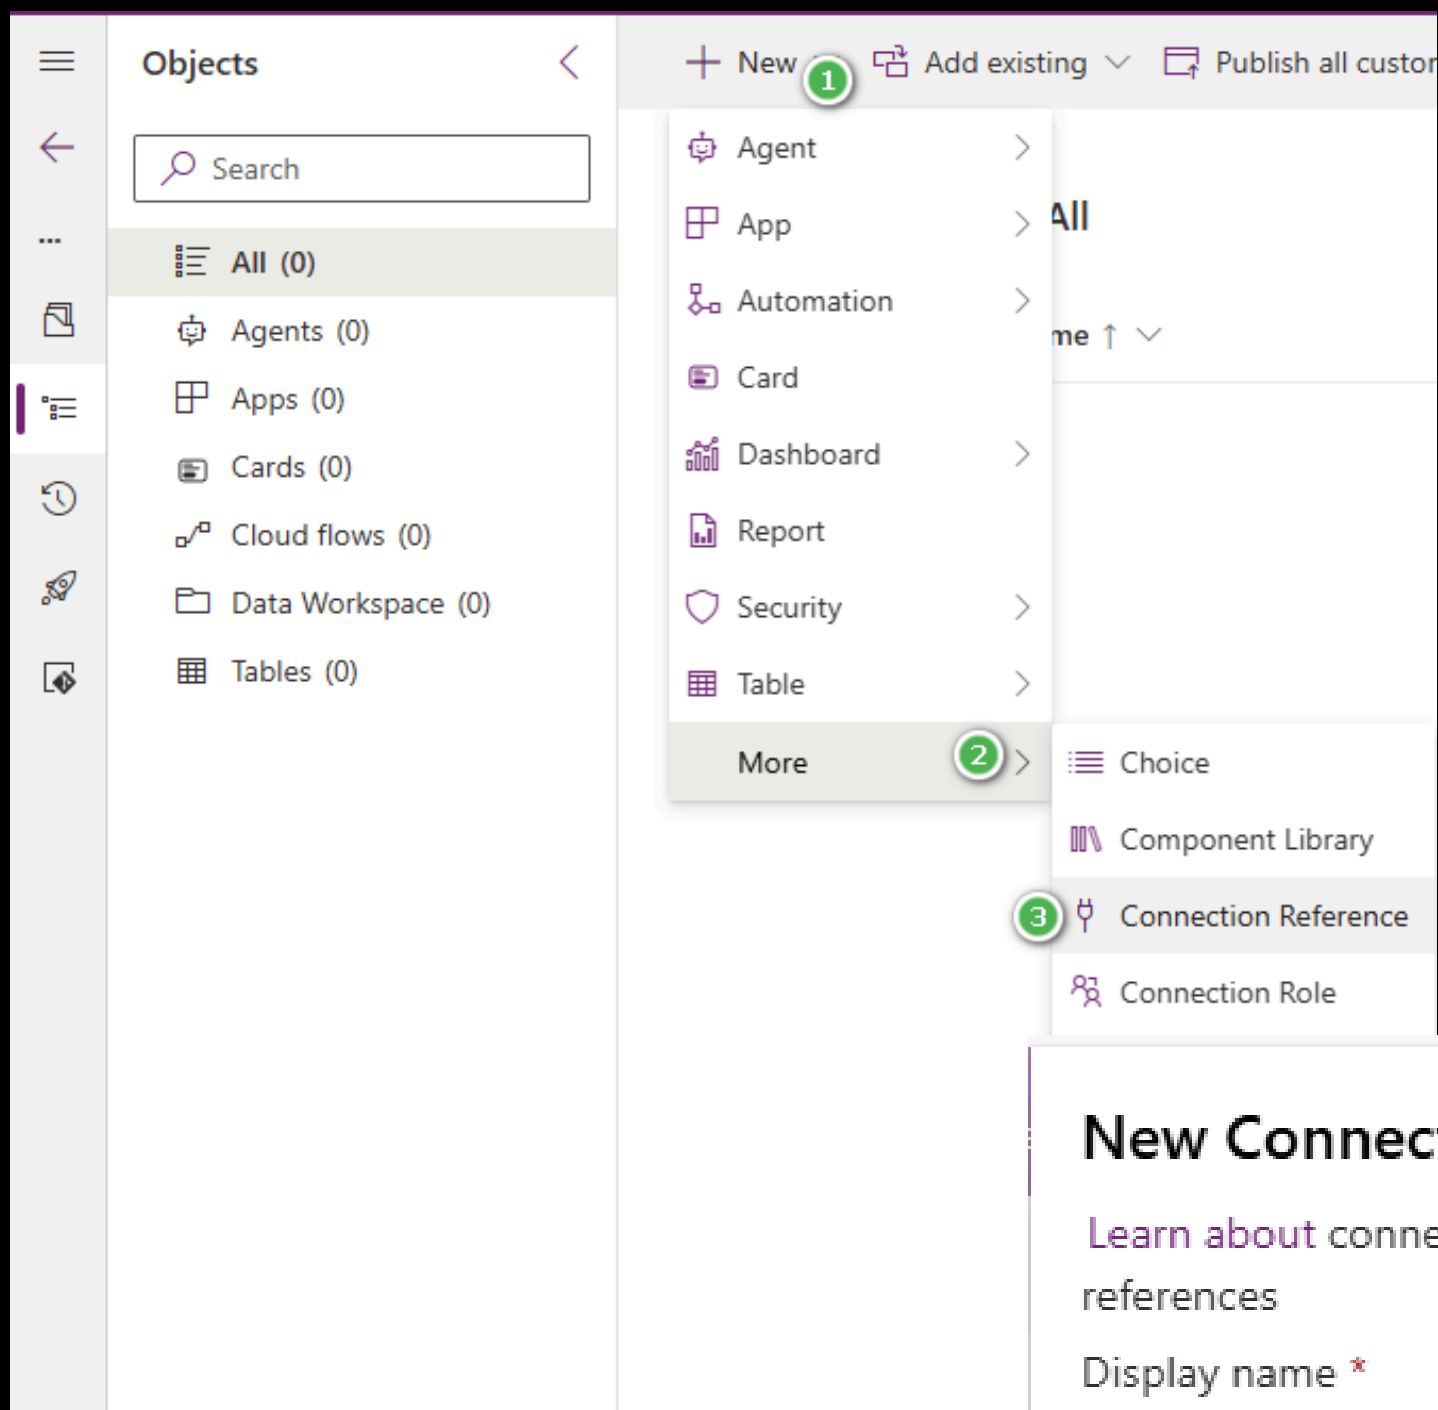

In a Maker Portal not long ago

If you wanted to create a new
Connection reference
as a Service Principal
you had to select
Connect with Service Principal
from within a Dataverse flow step

**Not very self-explaining
or user-friendly**

Now you can either select
New Connection Reference
from within a solution
and select
Microsoft Dataverse Connector
&
New connection ...

New Connection Reference ✕

[Learn about](#) connections and connection references

Display name *

Name * ⓘ

Add a description

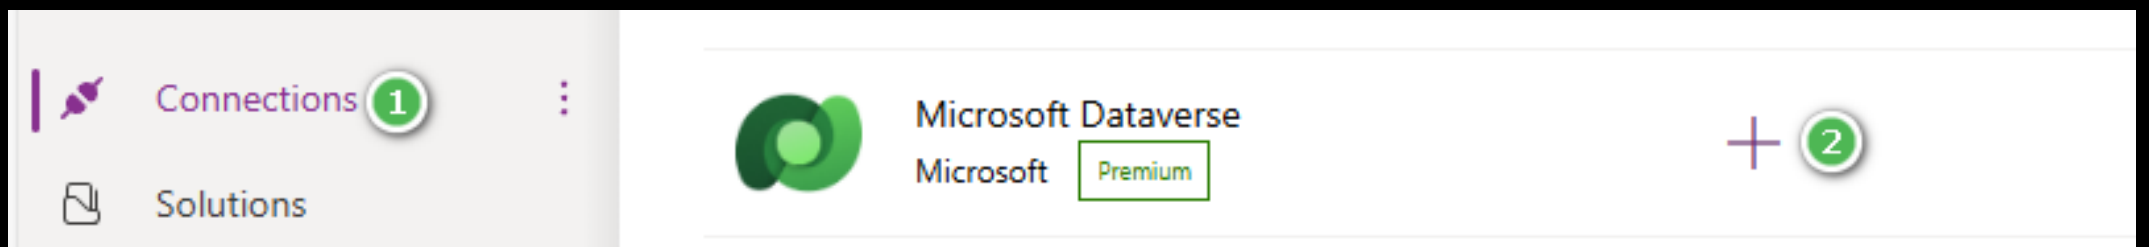

Connector *

Connection * ⓘ 🔄 Refresh

[+ New connection](#)

... or directly select
Connections
from the
Maker Portal Main Menu bar
search for Microsoft Dataverse
and click on +

Both ways will open the
new dialog where you can select
Service Principal as
Authentication Type
